

KLIA INFORMATIK SDN BHD

KLIA INFORMATIK SDN. BHD. is an IT solutions provider specializing on the Airport Systems implementation, where for the airport terminal, FIDSPlus® (FIDS) and ViewPlus (Airport Operational Databases) solutions are our core products. Apart from our products we also provide specific IT and project management consulting services for segments in the airport which includes the consulting services for Airport Terminal Systems, Aerodrome Air Traffic Systems and Area Air Traffic systems implementation.

Originated from a privatised government entity that was formed in 1993, KLIA Informatik is the IT Solutions and Consulting arm for the KLIA Premier Holdings Group of companies – the developer of Kuala Lumpur International Airport (KLIA), Malaysia.

Due to domestic demand, we established our airports IT division within KLIA Informatik in 2004 and our core team are the airport IT specialists. Our strength lies in our solutions as well as the understanding the business process and in managing large scale integration of various and complex airport systems. Our solutions are also marketed at very competitive rates.

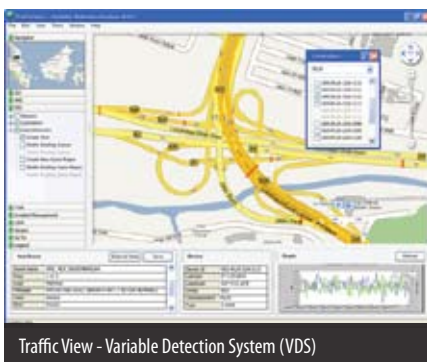

Our range of solutions

OpsView Cockpit

Operation Centre Cockpit Engine namely OpsView is a software toolkit that provides a management structure and system for conducting operational activities from operation/command center. This toolkit will help develop modules by providing database, business logics, user interfaces, report template, etc. It also provides a command center and its operational staffs with a standardized operational structure and common terminology.

OpsView provides a useful and flexible management system that is particularly adaptable to operational activities and events involving multi-jurisdictional or multi-disciplinary responses. OpsView provides the flexibility needed to rapidly activate and establish an organizational format around the functions that need to be performed.

OpsView empower Operation/Command Center experts who are non-programmers to build or expand their own modules instead of relying on programmers to perform the hard coding.

Traffic View - Variable Detection System (VDS)

Using OpsView we can have a powerful, friendly, flexible, scalable and easy approach for any operation center of an organization (e.g. airport operation center, traffic management center, police command center, local authority monitoring center, etc) to build their own software application in a short period, inexpensive and meet their operational requirements.

User Market Segment

- i) Government and Local Authorities such as Police, Fire Brigade, Customs, Marine, City Council etc.
- ii) Airports, Seaports, Bus Terminals, Train Stations, Industry plants, Disaster Center, Disease Centre etc.

TrafficView

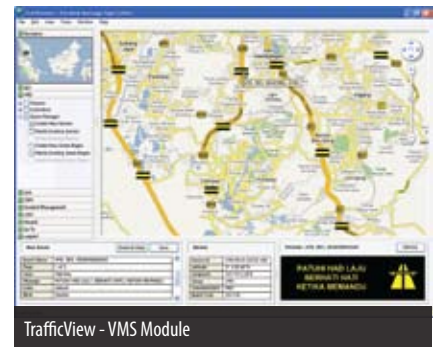

TrafficView® is a modular Commercial off the Shelf with a presentation layer for the Road Traffic Control Management Centre. It allows the Traffic Management Centre to view the road and traffic condition on GIS map.

Traffic Management Centre

This system is linked in real time to sensor throughout the road and will provide the alerts and statuses to the operator.

Apart from the view of the road traffic, the TrafficView® will also provide Incident Management Capabilities.

TrafficView - VMS Module

TrainPlus

TrainPlus® is a commercial off the shelf software, which can be configured and customized to suite the customer requirements.

It is a suite of modular applications for train scheduling 'Passenger Information Display System' with much more functionality.

Passenger LED Display
